

3D Spider

What you need:

- Paper
- Pencils/textas
- Scissors
- Glue

What to do:

1. To make the spider's body, you need four circles of paper the same size. You can print the circles on the next page and cut them out. If you do not have a printer, fold a piece of paper in half, then in half again. Use something like a mug, to trace a circle onto the paper. Cut out and you will have 4 circles the same size. Colour the circles in and draw eyes on one. I made my spider into a redback.
2. Fold three of the circles in half. Cover one side of a circle in glue. Stick another circle onto this. Glue the other side, and stick the third circle down. Cover the fourth circle with glue and stick down to finish the 3D circle.

3. Make the spider's legs using pipe cleaners. Bend into shape and stick to the back using sticky tape.
4. Draw a spider web onto paper and stick the spider down using glue or sticky tape.
