

Art Using Positive and Negative Space

Positive space is the subject of the artwork, like the rainbow in this picture.

Negative space is the empty area around the image in the artwork, which is the black background in the rainbow image.

You are going to create your own positive and negative space art piece. If using the rainbow example, for your positive art, colour in the rainbow and leave the background either white or one colour. For the negative art, leave the rainbow uncoloured or colour it black, and colour in a pattern on the background.

For an extra challenge, use the template with a line through the middle. On one side, colour the rainbow different colours. On the other side, fill the background with colour and pattern.

Show us what you have made on the [Kids Creations Gallery](#).
