

Warm and Cool Colours

We are going to look at warm and cool colours. Warm colours are pinks, reds, oranges and yellows. Cool colours are purples, blues and greens. The use of certain colours can make you feel different emotions when you look at art. Colour in this sunset image using warm colours for the sun and sky, then cool colours for the water. Then do it again but reverse the colours. Use cool colours for the sky, and warm colours for the ocean. Do you feel different looking at each image?
