

3D Christmas Star

What you need:

- Paper
- Pencils/textas
- Scissors
- Glue

What to do:

1. Print out the star shapes on the next page. Colour these in and cut them out.
2. To make the star 3D, you are going to layer the strips. Glue just on the pointed ends and place on the star, matching the pointed ends up. Then layer the other strips on the other points.
3. You can colour in and cut out the tree and make a card with the 3D star on top.
